

Rajib K Sahaji joined University of Saskatchewan in May 2010 to start his Master's program in Transportation Engineering. Prior to joining U of S, he completed his Bachelor's degree in Civil Engineering from Bangladesh University of Engineering and technology (BUET) in 2008.

Rajib's research interests focus the area of Transportation Safety. His current study involves the formulation, evaluation and application of high proportion safety network screening methods to identify crash hotspots based on atypical crash types for the City of Saskatoon. He is also involved in an ongoing project which aims to develop a GIS-based spatial analysis and visualization system of crash hotspots for the City

of Saskatoon funded by the Saskatchewan Government Insurance (SGI).

Besides School and research, he enjoys listening music, watching movies and photography a lot.
